{^} PROTOCOL ONE // FREE PUBLIC DESK REFERENCE v2.6

DOCLOCK 1.5 (183/183) · CLK-ATTEST-1 · G.A.I.L.

{^} Executive Deepfake Wire-Callback Checklist & DCM Intro Spec

Verification Needs No Permission. Keep this 1-page reference at every CFO, Treasury, Legal, and AI Agent approval desk.

01 // FIVE-STEP EXECUTIVE DEEPFAKE WIRE-CALLBACK CHECKLIST (SOP-01)

- [ ] **STEP 1 — ZERO-TRUST MEDIA RULE:** Treat every urgent Zoom, Teams, phone, voice-note, or email payment instruction as unverified channel transport—even when voice timbre and video likeness match the CEO or CFO.
- [ ] **STEP 2 — PRE-REGISTERED DIRECTORY CALLBACK ONLY:** Never dial a phone number or click a link inside the incoming message. Initiate an out-of-band callback using only pre-registered internal corporate directory numbers.
- [ ] **STEP 3 — TRI-SIGNATURE (<10.0s BURST EVIDENCE):** Require the authorizing human officer to complete three sequential handwritten signatures (*Intent + Identity + Confirmation*) inside a single <10.0-second burst window.
- [ ] **STEP 4 — DOCLOCK 1.5 + CLK-ATTEST-1 TIME ATTESTATION:** Seal the full 64-character SHA-256 digest of the wire instruction document and verify dual-authority RFC 3161 time (FreeTSA + DigiCert within ±1.0s UTC).
- [ ] **STEP 5 — {^} ASCII SWIFT / FEDWIRE TAG:** Embed the plain-text {^} Digital Corporate Mark and Alfa Code session token in SWIFT MT103 Field 70 / ISO 20022 remittance fields before releasing funds.

02 // THE 5-LAYER {^} HUMAN INTENT VERIFICATION ARCHITECTURE (CANON)

L1 // WHO — Tri-Signature	3 sequential handwritten signatures (Intent + Identity + Confirmation) in <10.0s governed by Identity Physics.
L2 // WHAT — DocLock 1.5	Full 64-char SHA-256 document hash + 4-tier tamper verdict (VERIFIED / WARNING / INTEGRITY ALERT / BROKEN SEAL).
L3 // WHERE — Alfa Code	Human-readable session location & routing token binding the physical signing ceremony to the audit ledger.
L4 // WHEN — CryptoLock + CLK-ATTEST-1	Dual-authority RFC 3161 cryptographic timestamp (FreeTSA + DigiCert) verifying clock drift ≤ 1.0s UTC.
L5 // CORTEX — G.A.I.L.	Guardian Adaptive Intelligence Layer — multi-factor behavioral scoring & non-repudiable HITL audit receipt.

03 // INTRODUCTORY {^} DIGITAL CORPORATE MARK (DCM) SPECIFICATION

WHY 3-BYTE ASCII {^} (0x7B 0x5E 0x7D) SURVIVES WHERE .PNG / .SVG LOGOS STRIP:

• Survives plain-text email gateways, SWIFT MT103 Field 70, JSON APIs, CSV/SIEM audit logs, and LLM context windows.

SWIFT FIELD 70 TAG: /URI/{^} P1-TS-3OF3 // DL15:FULL-64-CHAR-SHA256 // CLK-ATTEST-1:UTC-OK

CANON CAVEAT: "DocLock proves a document is unchanged, not that what it says is true."
